

Project manager Data & IT

Oegstgeest, The Netherlands

About CellPoint

Engineering immune T cells from cancer patients using Chimeric Antigen Receptors (CARs) are a great invention from the last decade, eradicating tumors and providing durable remissions. The mission and vision of CellPoint is to deliver the promise and feasibility of manufacturing autologous immunotherapies at the point-of-care into approved routine use. CellPoint is developing various CAR-T immunotherapies which have enormous potential for treating various cancers, using an innovative concept. One of the key hurdles in making these therapies more accessible to larger patient populations is the difficulty in manufacturing at-scale, robustly, and close to patients.

CellPoint utilizes an automated Lonza's Cocoon® Platform in combination with CellPoint's IT Platform, xCellit, for workflow management to manufacture cell therapies at the point-of-care. This can lower manufacturing costs and decrease time to treatment, with vein-to-vein time lowered to as little as 5-7 days compared to the current industry standard of more than a month, and also circumvent complex logistics and thereby solving the key issues facing CART therapeutics.

We are a young and fast-growing company. New team members have the opportunity to actively shape their position and contribute to our mission, being part of a very motivated and multidisciplinary team

About xCellit

xCellit is our IT platform which comprises the full 'vein-to-vein' workflow at the clinic and the manufacturing facility. It is the first digital fully integrated manufacturing & quality control execution system which allows the collection of product data for real-time monitoring of product quality. Every day clinicians, manufacturing and QC operators use xCellit for patient treatments. The IT infrastructure supporting the platform comprises a cloud and onsite part (amongst others a server and tablets).

About the role

As Project manager Data & IT you will be responsible for the development, day-to-day operations and user support of our xCellit IT platform. Furthermore, you will in the lead for setting up and installing the supporting IT infrastructure at new sites and monitoring the installations of existing sites. You will work closely together with the other departments and the sites to get the most out of xCellit.

Responsibilities

- xCellit day-to-day operations and support
- Setting up new users and sites in xCellit
- Training new users in xCellit
- Setting up IT infrastructure at new sites and monitoring all hardware
- Development of CellPoint data & IT systems

Qualifications

- MSc in IT, software development or related discipline
- Experience in life sciences or healthcare is an advantage
- Experience in GxP compliance and other Q systems is an advantage
- Strong interpersonal, verbal and written communication skills
- Result-driven and can-do mindset
- Independent worker in charge of own projects

CellPoint offers

- Competitive salary
- Dynamic environment using cutting edge technologies, aiming to surpass the leaders in the field
- Great culture with strong emphasis on team performance and personal development
